

REPORT
OF
PYTHON FULL STACK DEVELOPMENT INTERNSHIP

Submitted

To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B.Tech CSE

By

UDIT YADAV

Roll Number: 2410030368

Batch: 2024–28

2026-27

CANDIDATE’S DECLARATION

I, Udit Yadav, do hereby declare that the internship report titled “Python Full Stack Development Internship” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

Signature: UDIT YADAV

Student Name: UDIT YADAV

Roll No.: 2410030368

ACKNOWLEDGEMENT

I take this opportunity to express my sincere gratitude to everyone who supported and guided me during the successful completion of my 10-week Python Full Stack internship.

I am thankful to EduSkills Academy for providing the internship opportunity and for the structured exposure to full-stack web development technologies. The internship covered important areas including HTML, CSS, Bootstrap, JavaScript, jQuery, Python, Django, SQL, and Git and Version Control. This learning experience helped me understand how different technologies work together in the development of web applications.

I am also grateful to my teachers and mentors for their guidance, encouragement, and constructive suggestions during the preparation of this report. Their support helped me organize the technical learning gained during the internship and present it in a systematic manner.

Finally, I express my heartfelt gratitude to my parents and family for their continuous encouragement, support, and blessings throughout my academic journey and internship.

Signature: UDIT YADAV

Student Name: UDIT YADAV

Roll No.: 2410030368

CERTIFICATE OF INTERNSHIP

PRESENTED TO

Udit Yadav

has successfully achieved the Internship Credential by completing a 10-week program in the domain of

Python Full Stack

During the internship, the learner demonstrated proficiency in:

- HTML: Foundations of Web Development
- CSS: Styling and Designing Web Pages & Bootstrap: Responsive Web Design Framework
- JavaScript Fundamentals and DOM Manipulation
- jQuery: Simplifying JavaScript Development
- Python: Programming Fundamentals and Applications
- Building Web Applications Using Django
- SQL: Database Querying and Management
- Git & Version Control: Managing Code Effectively

This certification recognizes the successful completion of the internship requirements.

Issued on: Jun 01, 2026
Certificate ID: 2026-3C3925045A

4. PROJECT DESCRIPTION

4.1 Introduction

The internship was a 10-week learning and practical training program in the domain of Python Full Stack development. The certificate issued by EduSkills Academy confirms successful completion of the program and identifies the major technologies covered during the internship: HTML, CSS, Bootstrap, JavaScript, jQuery, Python, Django, SQL, and Git & Version Control. The training therefore provided exposure to both client-side and server-side aspects of web application development.

The main purpose of a full-stack development learning program is to understand how a web application is designed as an integrated system rather than as an isolated collection of technologies. Front-end technologies are used to create the visible interface and user interaction, while a back-end framework such as Django can handle application logic, routing, authentication-related processing, and communication with a database. SQL provides a structured way to manage persistent application data, and Git supports controlled management of source code.

Since the internship certificate does not identify a separately deployed industry project, this report treats the internship work as a structured Python Full Stack training experience. The project description therefore presents the learning, development workflow, and conceptual integration of the technologies covered rather than claiming a specific commercial application or client deliverable.

4.2 Organization Profile

EduSkills Academy is the organization identified on the internship completion certificate issued to the student. The certificate records that Udit Yadav successfully completed a 10-week internship credential in the domain of Python Full Stack. It also records the technology areas in which proficiency was demonstrated. The available certificate establishes the internship domain, duration, covered technologies, completion status, issue date, and certificate identification details.

From the internship credential, the training can be understood as a technology-oriented program designed to develop practical familiarity with the components of modern web application development. The sequence of technologies—from HTML and CSS/Bootstrap through JavaScript and jQuery, followed by Python, Django,

SQL, and Git—represents the major layers involved in building and maintaining web applications.

For the purpose of this academic report, no additional organizational claims such as office location, founding history, employee strength, client portfolio, or specific commercial products are made because those details are not present in the supplied certificate.

4.3 Problem Statement

Developing a web application requires an understanding of multiple interconnected technologies. A learner who studies only a single programming language or only front-end design may not understand how the user interface, application logic, database, and source-code management work together. The internship addressed this learning requirement by providing exposure to the principal technologies used across the full-stack development process.

The central problem addressed by the internship can therefore be stated as follows: to develop a structured understanding of how a complete web application can be designed, implemented, connected to a database, and maintained using a combination of front-end technologies, Python/Django back-end development, SQL, and Git-based version control.

4.4 Project Objectives

The objectives of the internship and the associated full-stack development learning activity were:

- To understand the foundations of web development using HTML.
- To develop properly styled and responsive web pages using CSS and Bootstrap.
- To understand JavaScript fundamentals and use DOM manipulation for interactive web-page behavior.
- To use jQuery for simplifying common JavaScript development tasks.
- To strengthen programming fundamentals and applications using Python.
- To understand the Django framework and its role in building web applications.
- To learn SQL concepts for database querying and management.
- To understand Git and version control practices for managing source code effectively.

- To understand how front-end, back-end, and database components can operate together as a full-stack application.
- To build a foundation for further development of maintainable and database-driven web applications.

4.5 Scope of the Project

The scope of this internship report is limited to the Python Full Stack technologies and learning areas confirmed by the internship certificate. It covers the fundamental development layers represented by HTML, CSS, Bootstrap, JavaScript, jQuery, Python, Django, SQL, and Git & Version Control.

The scope includes understanding the role of each technology, practicing their basic integration, following a development workflow, and understanding the conceptual architecture of a web application. It also includes source-code organization and database interaction at an introductory practical level.

Because no separate client or deployed industry project is identified in the supplied documents, the scope does not claim implementation of a particular commercial system, production deployment, real-world client integration, or measured business performance. The report instead documents the internship as a structured full-stack development training experience.

4.6 Technologies and Tools Used

The following technologies and tools are explicitly identified on the internship completion certificate and form the technical foundation of this report.

Technology/Tool	Role in Full Stack Development	Internship Learning Area
HTML	Defines the structure and semantic content of web pages.	Foundations of Web Development
CSS	Controls presentation, layout, spacing, typography, and visual styling.	Styling and Designing Web Pages
Bootstrap	Provides responsive design components and a grid system for different screen sizes.	Responsive Web Design Framework
JavaScript	Adds client-side logic and interactive behavior.	Fundamentals and DOM Manipulation
jQuery	Simplifies common JavaScript	Simplifying JavaScript

	and DOM-related development tasks.	Development
Python	Provides programming fundamentals and server-side application development capabilities.	Programming Fundamentals and Applications
Django	Provides a Python-based framework for building structured web applications.	Building Web Applications Using Django
SQL	Supports database querying and management of persistent application data.	Database Querying and Management
Git & Version Control	Supports source-code tracking, organization, and controlled changes.	Managing Code Effectively

Table 4.1: Technologies and Tools Covered During Internship

The technologies can be grouped into four broad layers. HTML, CSS, and Bootstrap form the presentation layer. JavaScript and jQuery provide client-side interaction. Python and Django provide the primary programming and web-application layer. SQL provides database interaction, while Git and version control support the development and maintenance process.

The combination of these areas is important because a full-stack application requires coordination between the interface presented to the user, the processing performed by the server, the data stored in the database, and the source code used to maintain the application.

Technology Area	Expected Learning Outcome
Front-end structure and styling	Ability to create structured pages and apply consistent, responsive styling.
Client-side scripting	Ability to understand browser-side logic and DOM-based interaction.
Python programming	Ability to apply programming fundamentals to application-oriented problems.
Django development	Ability to understand the structure and workflow of Python-based web applications.
Database management	Ability to understand SQL queries and organized storage/retrieval of application data.
Version control	Ability to track and manage source-code

	changes using Git concepts.
--	-----------------------------

Table 4.2: Technology-wise Learning Outcomes

4.7 System Architecture

As there was no separate deployed project specified on the internship certificate, the following architecture is presented as a conceptual representation of how the technologies covered during the internship fit together in a typical Python Full Stack web application. It is not claimed to be the architecture of a specific commercial system.

USER / BROWSER Accesses and interacts with the web application
HTML + CSS + BOOTSTRAP Page structure, styling and responsive interface
JAVASCRIPT + jQuery Client-side interaction and DOM manipulation
DJANGO + PYTHON URL routing, application logic and server-side processing
SQL DATABASE Persistent storage and querying of application data

Figure 4.1: Conceptual System Architecture for Full Stack Web Application

The architecture begins with the user interacting through a browser. HTML provides the page structure, while CSS and Bootstrap determine presentation and responsive layout. JavaScript and jQuery can handle client-side interaction and DOM manipulation. Requests requiring server-side processing can be handled by a Django application written in Python. Where persistent information is required, the application can communicate with an SQL database for storing and retrieving data. Git and version control operate across the development process to maintain source-code history and controlled changes.

4.8 Methodology

The internship methodology can be represented as a progressive learning and development workflow. The technologies covered by the certificate naturally support a sequence that begins with web-page foundations, moves through interactive client-side development, introduces Python and Django for server-side development,

connects applications with SQL databases, and finally incorporates version-control practices.

1 Web Foundations	2 Styling & Responsive Design	3 Client-side Scripting	4 Python & Django	5 SQL & Database	6 Git & Version Control	7 Integration & Review
-------------------------	--	-------------------------------	-------------------------	------------------------	-------------------------------	------------------------------

Figure 4.2: Internship Learning and Development Workflow

Step 1 – Web foundations: The learning process begins with HTML to understand document structure, common elements, forms, links, and the organization of content within a web page.

Step 2 – Styling and responsive design: CSS is used to control the visual presentation of web pages, while Bootstrap introduces reusable responsive components and layout concepts for different screen sizes.

Step 3 – Client-side scripting: JavaScript fundamentals and DOM manipulation introduce dynamic behavior in the browser. jQuery provides a simplified approach for common client-side scripting and DOM-related operations.

Step 4 – Python and Django: Python programming fundamentals provide the programming base for server-side work. Django then introduces a structured framework for building web applications, including request handling and application organization.

Step 5 – SQL and database management: SQL is used to understand how application data can be stored, queried, updated, and managed in a structured database environment.

Step 6 – Git and version control: Version-control concepts provide a disciplined way to track source-code changes, maintain versions, and organize development work.

Step 7 – Integration and review: The final learning objective is to understand how the individual technologies connect into a coherent full-stack workflow and to review the resulting implementation for correctness, organization, and maintainability.

4.9 Expected Outcomes

Successful completion of the internship is expected to provide a practical foundation in Python Full Stack development. Based on the areas listed on the completion certificate, the expected outcomes include:

- A clear understanding of the structure and styling of modern web pages.
- Familiarity with responsive design principles using Bootstrap.
- Understanding of JavaScript fundamentals, DOM manipulation, and jQuery-based development.
- Improved programming ability using Python fundamentals and application-oriented concepts.
- Understanding of the basic structure and development workflow of Django web applications.
- Ability to understand and work with SQL queries and database management concepts.
- Awareness of source-code management practices through Git and version control.
- An integrated understanding of how front-end, back-end, and database components interact in a full-stack web application.
- A stronger foundation for undertaking future web-development projects and advanced framework learning.

The internship certificate records successful completion of the internship requirements. Therefore, the primary outcome documented by the supplied evidence is completion of the 10-week Python Full Stack program and demonstrated proficiency in the listed technology areas.

4.10 Certificates of Completion and Other Communication Mail Proof Must Be Attached

The internship completion certificate issued by EduSkills Academy is attached as part of this report. The certificate is presented in the report as the primary documentary proof of completion. It identifies the learner as Udit Yadav, confirms a 10-week Python Full Stack internship, lists the technology areas covered, records the issue date as June 01, 2026, and provides Certificate ID 2026-3C3925045A.

If additional official communication such as joining instructions, completion emails, assessment communication, or other internship correspondence is required by the university, those documents should be appended after the certificate section in the final printed submission. No such additional communication document was supplied with the materials used to prepare this report, so none has been fabricated or represented as attached.

5. BIBLIOGRAPHY/REFERENCES

The following references are included as general technical documentation supporting the technologies discussed in the report. They are presented in a consistent academic style.

- [1] Python Software Foundation, “Python 3 Documentation,” Python Documentation.
- [2] Django Software Foundation, “Django Documentation,” Django Documentation.
- [3] Mozilla Developer Network (MDN), “HTML: HyperText Markup Language,” MDN Web Docs.

ANNEXURE ? INTERNSHIP DOCUMENTARY PROOF

Offer Letter and Official Communication Mail Proof

This annexure contains the documentary evidence referred to in Section 4.10 of the internship report. It includes official EduSkills Foundation communication and the Internship Offer Letter. The offer letter is inserted as image-rendered pages so that it appears as a visual copy rather than as a PDF attachment.

Communication Mail Proof ? Certificate of Completion Email

Internship Offer Letter

Student Name : Udit Yadav
Stream : B.Tech
Branch : B.Tech(Computer Science and Engineering)
Institute Name : IILM University, Greater Noida
Internship Domain : Python Fullstack Developer
Internship Duration : April 2026 - June 2026
AICTE Student ID : STU699ca0c04eaa61771872448

We are pleased to inform you that you have been selected for the 8-Week **AICTE – EduSkills Virtual Internship Program**.

During this internship, you will learn and demonstrate industry-relevant skills that will enhance your employability and strengthen your confidence in the subject area.

The program is designed to provide structured learning combined with practical exposure.

Internship Structure & Evaluation:

- The internship will follow a **week-wise structured learning plan**.
- You will be required to complete **weekly assessments** to track your progress and understanding.
- Certain modules will require submission of **project documentation and assignments**.
- In the final week, you must appear for a **Final Assessment Test**.
- The final grade will be based on your overall performance, including weekly assessments, project submissions, and the final test.

Upon successful completion of all required steps and assessments, you will be awarded a **Virtual Internship Certificate**.

Please note that this offer letter will be considered valid only after the successful completion of the internship program and fulfillment of all assessment requirements, including obtaining the final completion certificate. Without the final completion certificate, this offer letter shall not be treated as a valid document for any official purpose.

The week wise Structure of the Internship is as Follows:

Week	Module	Description
Week 1	HTML	Learn HyperText Markup Language (HTML), including page structure, elements, forms, tables, semantic tags, and website layout fundamentals.
Week 2	CSS	Master Cascading Style Sheets (CSS) including selectors, box model, positioning, flexbox, grid, responsiveness, and styling techniques.
Week 3	Bootstrap	Build responsive and mobile-first websites using Bootstrap components, grid system, utilities, and pre-built UI elements.
Week 4	JavaScript	Learn JavaScript fundamentals including variables, functions, loops, conditionals, DOM manipulation, and event handling.
Week 5	jQuery	Simplify JavaScript development using jQuery for DOM traversal, animations, event handling, and AJAX interactions.
Week 6	Python Programming	Learn Python basics including syntax, data types, loops, functions, OOP concepts, and backend development fundamentals.
Week 7	Django Framework	Build dynamic web applications using Django with models, views, templates, routing, and authentication systems.
Week 8	MySQL & Database Management	Learn SQL fundamentals, database design, CRUD operations, and integrate MySQL with Django applications.
Internship Grade Point Assessment		

Note: There is no stipend associated with this internship.

We congratulate you on your selection and wish you a successful learning journey.
